Two Strengths I currently have or are committed to developing:

- Strong written and verbal communication
- Strong decision-making skills under pressure
- Programming

Two values I have:

- Protecting people's privacy and personal information
- Innovation and creativity for security

Clarifying questions to determine what to include in my professional statement:

- Do I enjoy the technical challenge, the ethical responsibility, the societal impact — or a mix of these?
- Do I want to highlight my potential as a learner and future contributor, or emphasize current skills and achievements?
- How do my communication and decision-making skills help in real-world cybersecurity scenarios (e.g., incident response, teamwork, stakeholder communication)?
- How do my values — protecting privacy and promoting innovation — reflect the kind of cybersecurity professional I want to become?

Here are some suggestions you are encouraged to consider to help you continuously refine and strengthen your professional statement throughout the program:

1. Locate examples of current cybersecurity professionals' statements. Search for examples on GitHub or professional networking websites or apps. Compare your statement with statements you found online and determine ways you could improve your own statement.
2. Use a word processing spelling/grammar check or an online tool of your choice to make sure that your statement is free of errors.
3. Share your professional statement with trusted friends or colleagues and ask for their feedback. A second opinion is helpful to ensure that you are effectively conveying your ideas.
4. Research job postings and consider including key terms from the postings in your professional statement.

Professional Statement Versions:

I am a motivated cybersecurity professional with strong written and verbal communication skills, sound decision-making under pressure, and growing programming expertise. I am committed to developing innovative solutions that protect individuals' privacy and sensitive information while supporting organizations in maintaining a robust security posture. My goal is to contribute to secure, resilient systems that uphold trust and mitigate risk in an evolving digital landscape.

I am motivated by the technical challenge, ethical responsibility, and societal impact that cybersecurity brings. With strong communication and decision-making skills, I am dedicated to the innovation and development of solutions that protect the privacy of individuals and support

organizations in maintaining strong security postures. My mission is to help build safe, secure, and resilient systems that are trustworthy in a continuously evolving digital landscape.

I am passionate about cybersecurity because it blends technical challenge, ethical responsibility, and meaningful societal impact. With strong communication and decision-making skills under pressure, along with a commitment to continuous learning in programming, I strive to create innovative security solutions that protect people's privacy and empower organizations to safeguard their systems. My mission is to help build a safer, more trustworthy digital environment for everyone.
